WILDLIFE CONSERVATION IN THE POST-WAR WORLD

The war cost us much in the way of natural resources. The train loads of iron, copper, magnesium, and coal that went into the manufacture of ships and guns and tanks and airplanes--many left on foreign soils or lying at the bottom of the seven seas; the millions of barrels of precious oil that had to be burned to keep the vast military machine moving--

these resources are gone--and are irreplaceable. Fish and wildlife fared better than some of our other resources, according to Director Albert M. Day of the Fish and Wildlife Service in his address given at the 12th North American Wildlife Conference at San Antonio, Texas, February 3, 1947.

Mr. Day discussed the damaging effect of the war upon such natural resources as forests, streams, minerals, and soils, and the important place that the oceanic fisheries occupied in our domestic economy during the war years; also the future of these resources in the National conservation program.

Copies of this address may be obtained free of charge, from the U. S. Fish and Wildlife Service, Merchandise Mart, Chicago 54, Ill.
